

Seafrigo commits to energy transition with the integration of its first 5 Volvo FM Electric Trucks

- **Energy transition:** Seafrigo integrates 5 Volvo FM Electric Trucks to its fleet to reduce its carbon footprint and improve efficiency in the Le Havre port area.
- **Trucks adapted for port hauling:** The fully electric Volvo FM Trucks, with a payload of 44 tons and a range of 300 km, meet the requirements of port hauling.
- **Environmental and economic impact:** An 8% reduction in CO₂ emissions and fuel costs, while anticipating regulatory developments.

Le Havre, France:

Seafrigo Group, a major player in logistics specializing in the transportation of food products and cold chain management, announces the integration of 5 Volvo FM Electric Trucks.

These vehicles, the first electric trucks in Seafrigo's fleet, will be primarily dedicated to port hauling in and around its Le Havre, France headquarters.

This partnership with Volvo Trucks marks a significant step in Seafrigo Group's energy transition strategy, and is aimed at reducing its carbon footprint and improving the efficiency of its operations in the Le Havre port area.

Vehicles designed for port hauling

The 5 Volvo FM Electric trucks, equipped with 6 battery packs totalling 540 kWh and offering up to 300 km of range without recharging, perfectly meet the requirements for local and regional hauling, particularly in the Le Havre port area.

With a towing capacity of 44 tons, they ensure productivity equivalent to a diesel vehicle, while significantly reducing CO₂ emissions and noise pollution.

The charging solution was provided in partnership with "Autorecharge", enabling an installation tailored to Seafrigo Group's operational needs.

A high level of safety adapted to port requirements

To meet the safety requirements specific to port environments, the vehicles have been equipped with enhanced features, designed and integrated in collaboration with the Volvo Trucks technical teams:

- Additional cameras for maximum visibility around the vehicle.
- A specially installed coupling camera to secure the manoeuvre with trailers.
- Fifth wheel with remote locking and unlocking, allowing the driver to perform the manoeuvre without approaching hazardous areas.
- Enhanced chassis and battery protection, via a custom platform.
- Preparation and assembly carried out in Volvo Trucks' workshops, ensuring full compliance with port standards.

A technical and historic partnership

Seafrigo Group, a long-time Volvo Trucks customer, has chosen to adopt electric vehicles with its historic partner, having been convinced by:

- The performance of the Volvo FM Electric, tailored to the specific needs of port logistics.
- Volvo Trucks' expertise in electric vehicles.
- The responsiveness of the after sales service.
- The ability to provide a turnkey solution (vehicle, preparation, services, and charging).

Arnaud HOURDIN

Director of Port Activities at Seafrigo Group

The partnership with Volvo Trucks marks a key milestone in our decarbonization approach for port hauling in Le Havre. By integrating these first electric trucks, Seafrigo reaffirms its role as a pioneer in the energy transition of the logistics sector. We are proud to cooperate with Volvo Trucks to build a more sustainable and environmentally friendly future.

A positive environmental and economic impact

The integration of these electric vehicles allows Seafrigo Group to reduce its CO₂ emissions by 8% in its port hauling activities. The electrification of the fleet also contributes to the reduction of noise pollution and local emissions of atmospheric pollutants, such as fine particles and nitrogen oxides (NOx). In economic terms, Seafrigo Group expects a significant reduction in fuel and maintenance costs, particularly for mechanical components.

Training and support

Seafrigo Group drivers have already been trained in the use of these new vehicles. In parallel, Volvo will provide maintenance and servicing for the fleet, ensuring optimal operation of the electric trucks.

Towards a decarbonized future

Seafrigo Group, which is also participating in the SOCRATE project for the complete electrification of port hauling at the Port of Le Havre, plans to expand this fleet in the future based on the results achieved with the vehicles currently integrated. This pilot project represents a promising first step towards a more environmentally friendly future, with the potential for larger-scale development if the experience proves successful.

Jérôme FLASSAYER

Director of Electromobility at Volvo Trucks France

We are proud to support Seafrigo Group in this first step towards electrifying its fleet. The choice of the Volvo FM Electric confirms the long-standing trust between our two companies and demonstrates that electric technology is now perfectly suited to the demanding needs of port hauling.

Thanks to the joint efforts of the Seafrigo Group and Volvo Trucks Teams, and our network, we were able to develop customized solutions, particularly in terms of safety and chassis adaptations, to meet the specific requirements of the Port of Le Havre.

This cooperation reflects our shared ambition: to offer high-performing, safe and sustainable transport solutions. We look forward to supporting Seafrigo Group in the next steps of its energy transition.

About Seafrigo Group

For more than 40 years, Seafrigo Group has developed a worldwide network in food logistics within the refrigerated space leading to business partnerships with global clientele and brands.

The company based in Le Havre, which is growing strongly both in France and internationally, now has its own infrastructures in 25 countries and has built up a global network of partners. Seafrigo Group has 2,500 committed employees who organize the international transport of goods on 5 continents on a daily basis.

It is also the assurance of a controlled global logistics chain: reception of goods, port traction, storage at ambient or controlled temperature, order preparation, management of container loading, shipping and delivery to the final recipient.
